

Cleaning - Christy

- Remove outlier article lengths
- Get us set up with a DTM
- Would be helpful to have both TF-IDF and TF

	word1	word2	...	is_fake
article1	TF-IDF	...		T
article2	...			F

Predictive model - Omar

- Binary predictor: given article (in DTM format above), predict fake/real news
- Make multiple models (SVM, linear, naive bayes)
 - Select best one and compare to others
- Identifying strongest features (ie, words with strongest coefficient) would be helpful

Sentiment analysis - Colin

- Is one category strongly positive/negative, vice versa
- Frequency chart of positive/negative words in each category

Analysis - Patrick

- Descriptive stats of the two datasets/comparison
 - Article length
 - Titles?
 - Popular words over time (Zach visual)

Visual - Zach

- “Highly recommend” shiny
 - Drop in text of an article, run model on it and output prediction
- AUC/ROC curve for model
- Wordcloud of strongest features for each
- Visualize sentiment frequency chart
 - Over time?
